

Only Centor Passes*

Of the top 20 drugs dispensed in 2010, 19 require packaging in a 'tight' and/or 'tight and light resistant' container.

Only Centor passes the tests for all of its child-resistant offerings.**

For additional safety, our vials have a silhouette of a dog and cat on the cap to identify pet medications.

Centor's 1-Clic® Vial System and Screw-Loc® Vial System

**United States Pharmacopeia Chapter 671(USP 671) is designed to provide standards for the functional properties of plastic containers and their components used to package regulated articles. A container is intended to provide its contents protection in two areas: 1. Light Resistance – no more than 10% transmission, and 2. Moisture Vapor Transmission Rate (MVTR). To qualify as tight, no more than one of ten containers can exceed moisture transmission of 100mg per liter per day and none can exceed more than 200mg per liter per day.
