

**NEW**

# OLYMPIC CLEAN-CATCH™

*Now... a faster... easier way  
to collect clean urine specimens*

CLEAN  
disposable  
cups

## **Easy to use – Saves time**

The new Olympic Clean-Catch makes urine collection faster and easier with all size dogs – and you get clean specimens. With males, it is easy to position the Clean-Catch to collect clean mid-stream specimens. You can see what you are doing and make sure you get every drop. With females, the narrow, low profile cup slips easily under even small dogs.

## **Dog friendly**

Clean-Catch saves valuable minutes with every urine collection. Trying to collect urine with a hand-held cup or ladle is slow and inefficient. Some dogs get nervous and won't urinate when you are standing too close to them or will stop urinating when you place a cup under them. But the Clean-Catch is dog friendly. It keeps you at a distance, so the dog is more likely to urinate, and it won't spook the dog when you put it under him or her.

## **No more bending down to collect samples**

When you use the Clean-Catch, you don't have to bend over or stoop down. Easy on your back. The long handle and flat cup give you visibility, so you get a good specimen every time. More sanitary and makes urine collecting less messy.

## **Cleaner samples with disposable cups**

Because the disposable cups are clean, there is no danger of cross-contamination – assures better lab results and saves time. Also the holder prevents the cups from touching the ground. The cups have a handy pouring spout and are made of environmentally friendly plastic.

## **Eliminates washing – Always ready for use**

With these inexpensive disposable cups, no time is wasted washing cups or ladles. Each disposable cup costs less than a few seconds of a tech's salary. And since no washing is required, the Clean-Catch collector is always ready for the next patient.

## **Pays for itself**

The new Olympic Clean-Catch saves you time and money in three ways – you can collect specimens faster, it eliminates washing, and it is always ready for immediate re-use. By cutting costs, it will quickly pay for itself.
