

**Equine Suture Line – Designed specifically for the Equine Surgeon**

- **Bigger, stronger needle** options to accommodate the demands of large animal surgery
- **Large suture thread** options that are better at keeping the tougher skin of equines closed during the recovery process
- **Longer swaged suture** lengths enable surgeons to open fewer suture packs, helping to keep costs down
- **Bright, fluorescent suture** colors make it easier for the surgeon to see the suture against dark animal skin, hair and bloody surgical sites
